

GERS_073_1 IRAN

Comparison between the archive (QuickBird 24/12/2009) and the post event image (Ikonos-2 23/12/2010)

- Urban activity seems to be very similar (traffic, parking area and population concentration)
- No anomalous population concentration is detected
- No rubble observed in the streets or around the buildings
- Where visible electric poles are still in place
- Fence walls are still linear
- No collapsed buildings has been observed

Using this pair of images : no obvious damages are detected within the AOI covering Nematabad area.

After: IKONOS-2 acquired the 23rd december 2010

Before: QuickBird acquired the 24th december 2009

Rigan central avenue similar traffic and parking; globally no difference in population activity has been observed
