

NASA Support for Disaster Risk Management under the Committee on Earth Observation Satellites

Presented at the IWG-SEM meeting
by Stu Frye (stuart.frye@nasa.gov)
10-11 October 2013

Overview

- National Aeronautics and Space Administration (NASA) satellite tasking, data processing, and distribution for disasters – Sensor Web technology and science research
- NASA collaboration with Canadian Space Agency (CSA) for disaster management
- Committee on Earth Observation Satellites (CEOS) Flood Pilot and Group on Earth Observations (GEO) End-To-End Disaster Systems projects
- Ground validation, crowd sourcing, and hand-held clients

NASA Web Service URLs

- OpenID Provider-Server <https://op.geoblivi.com/> controls the security (this is where you setup your account)
- Campaign Manager <http://geobpms.geoblivi.com/home> allows tasking requests to be submitted (i.e., targets)
- EO-1 Server <http://eo1.geoblivi.com/> this is where EO-1 data can be found along with the status of future and past taskings
- Radarsat Server <http://radarsat.geoblivi.com/radarsat> where we provide access to Radar raw data, browse images, metadata, and processed flood products
- MODIS Flood Server <http://oas.gsfc.nasa.gov/floodmap/> is where you can point your browser to manually check on daily MODIS flood maps (browser GUI-based only)
- MODIS Flood Server <http://modis.geoblivi.com/modis> is the server that provides an API for accessing the daily MODIS maps

NASA URLs Concluded

- Flood Dashboard Client <http://matsu.opencloudconsortium.org/namibiaflood> this is an example of a client implementation that runs on a cloud computing platform provided through a collaboration with the University of Illinois/Chicago
- Web Coverage Processing Service (WCPS) <http://matsu.opencloudconsortium.org/wcps/session/login> is where you go to generate and run algorithms against satellite data
- Pub/Sub Server <http://opsb.geobliti.com/session/new> is where you setup a subscription for requesting notifications about new data in your area or from a particular instrument or with a particular feature or....The notifications come via Email, SMS, or twitter and contain RSS or Atom feeds for you to follow to find the processed or raw data. Clients can be automated to monitor the feeds and pull the data they are programmed to look for

NASA-CSA Collaboration Objectives

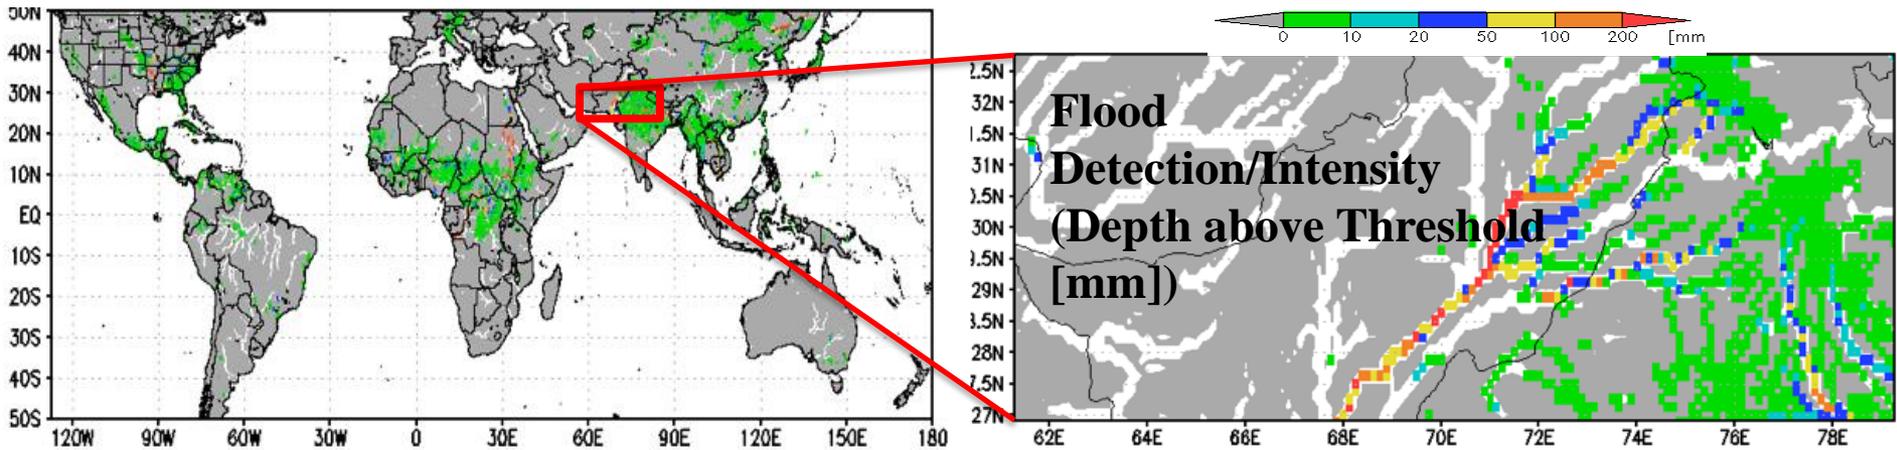

- To demonstrate the effectiveness of satellite imagery to strengthen regional, national and community level capacity for mitigation, management and coordinated response to natural hazards
- To identify specific satellite-based products that can be used for disaster mitigation and response on a regional level
- To identify capacity building activities that will increase the ability of the region to integrate satellite-based information into disaster management initiatives

Collaboration Approach

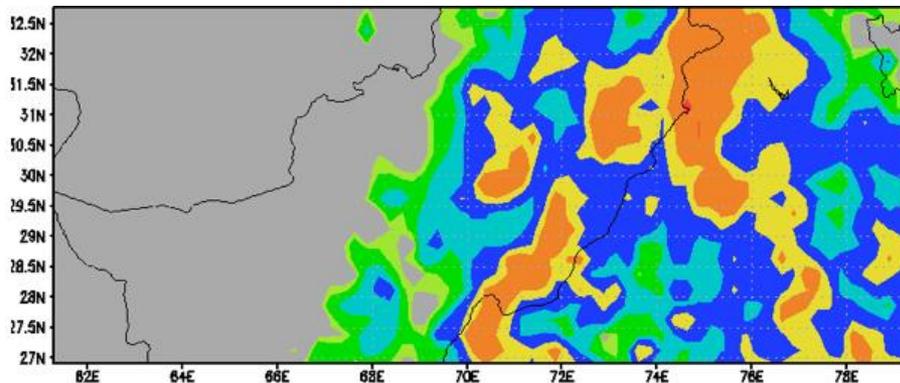

- Focus on areas where Earth Observations from satellites can have most impact (flooding, landslides, volcanoes, wildfires, etc.) and on large-scale disasters
- Select a small number of regional and national partners to validate usefulness of Earth Observations
- National agencies solicited in 3 regions – Caribbean/Central America, Southern Africa, and Southeast Asia (lower Mekong/Indonesia/Java) and partners selected based on:
 - Commitment to make relevant data sets available
 - Agreement to provide direct support (in-kind)
 - Assurance of close collaboration between key national, regional, and international players
 - Representative cross-section of GIS capability development
- Regional Teams created in all three areas with broad participation from concerned Departments
- Global Component setup for low-spatial-resolution, high-temporal-resolution assets

Global Flood Monitoring System (GFMS) Using Satellite Rainfall and Hydrological Model

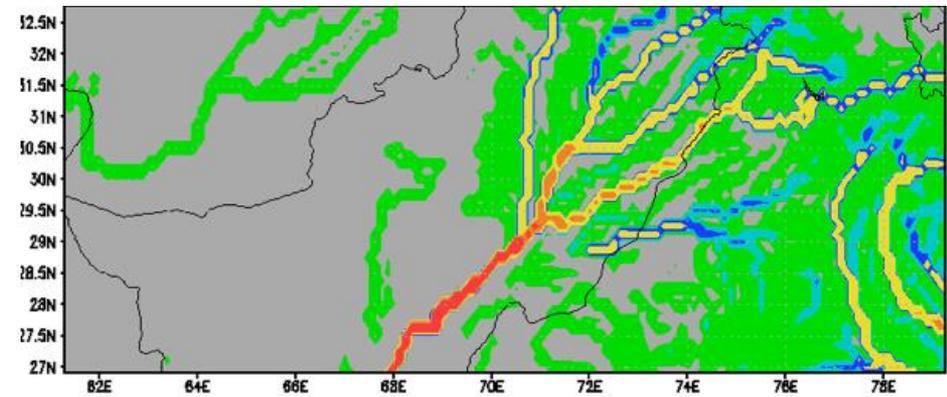

Example: Detection of Recent Flooding in Pakistan 20 August 2013 06 GMT

Rainfall (7 day Accumulation [mm])

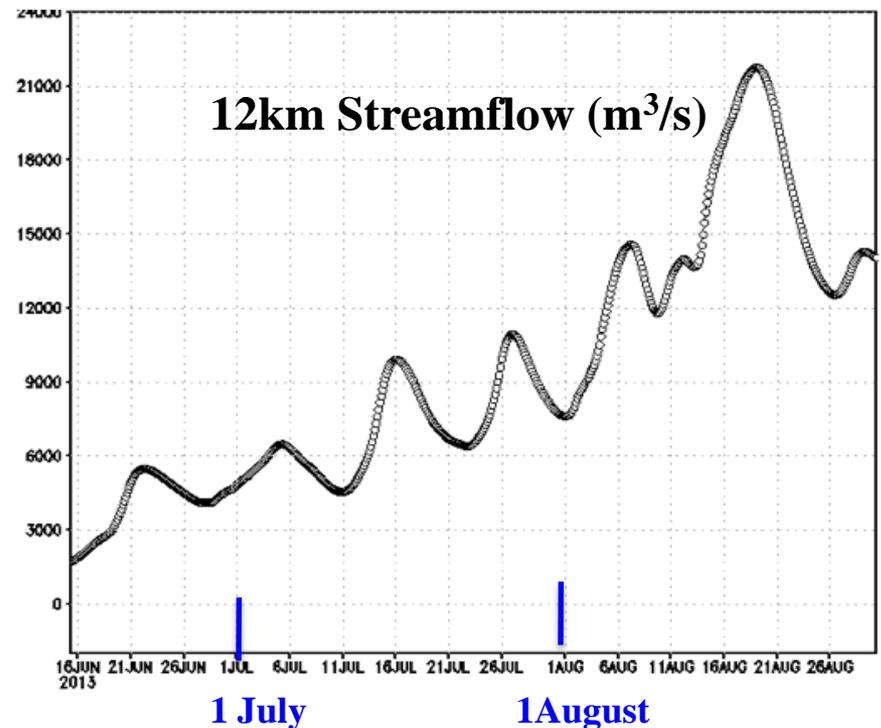

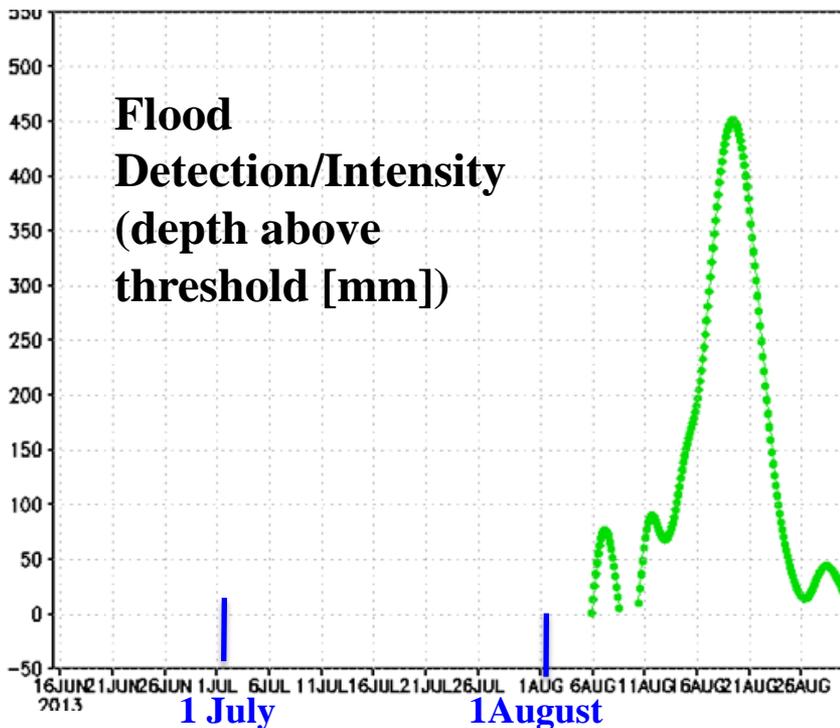

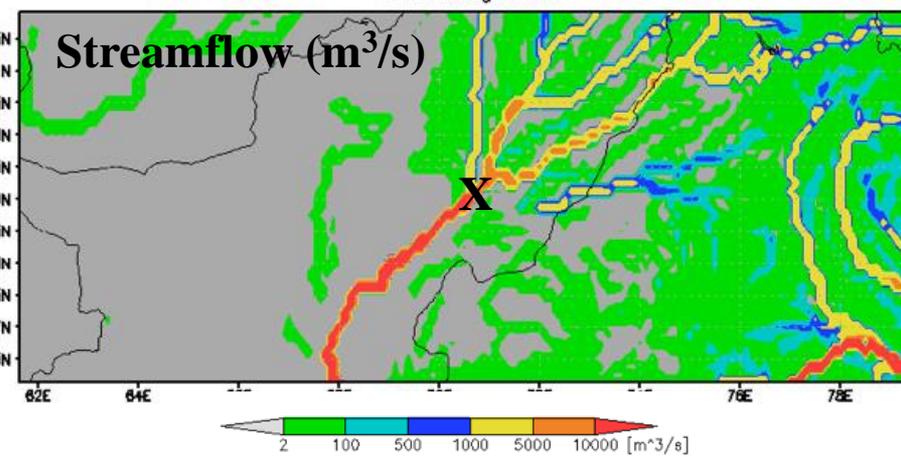

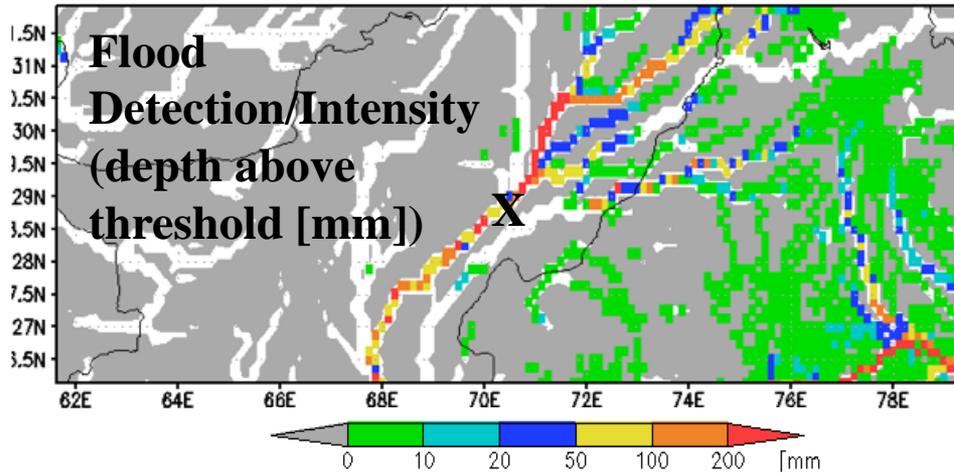

Streamflow [m^3/s]

<http://flood.umd.edu/>

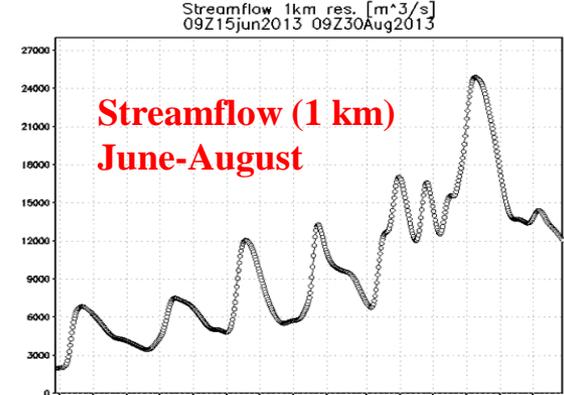

Adler/Wu U. of Maryland

Recent Flooding in Indus River, Pakistan (20 August 2013)

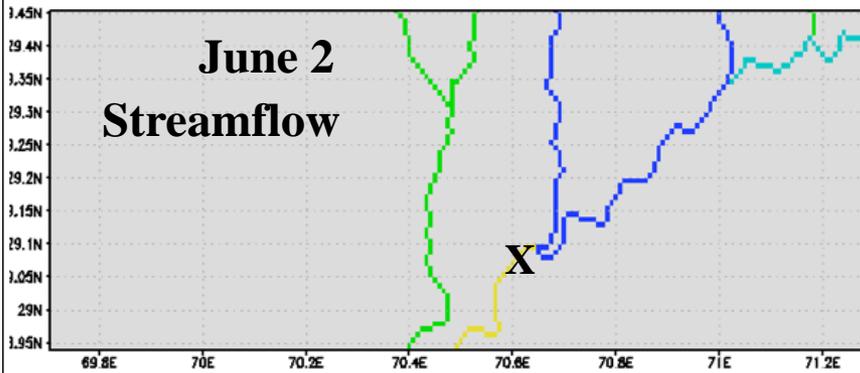

Real-time Calculations at 1 km

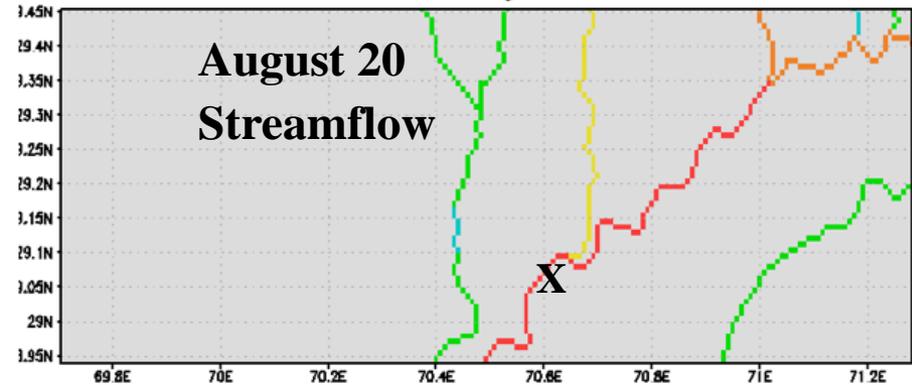

Streamflow and Water Storage (Routed Runoff + Bank Overflow)

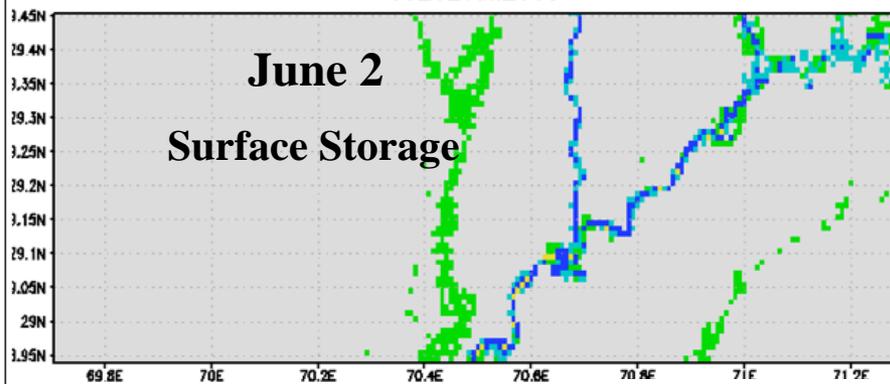

Streamflow 1km res. [m^3/s]
09Z02Jun2013

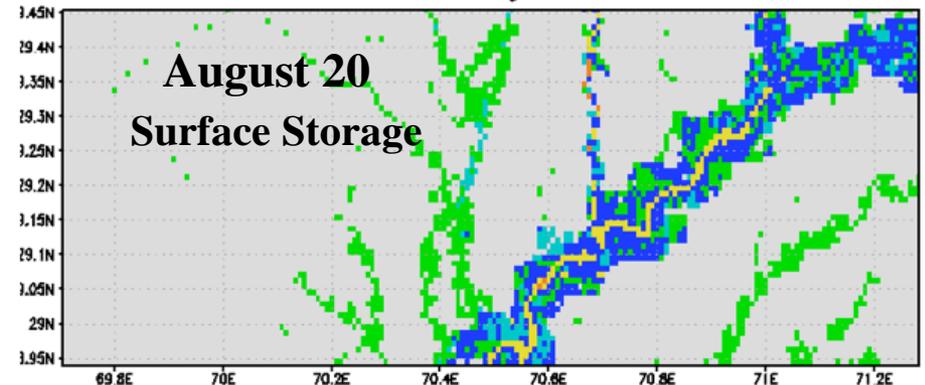

Streamflow 1km res. [m^3/s]
06Z20Aug2013

Surface Storage 1km res. [mm]
09Z02Jun2013

Surface Storage 1km res. [mm]
06Z20Aug2013

Example of Caribbean Satellite Disaster Pilot (CSDP) Steering Committee

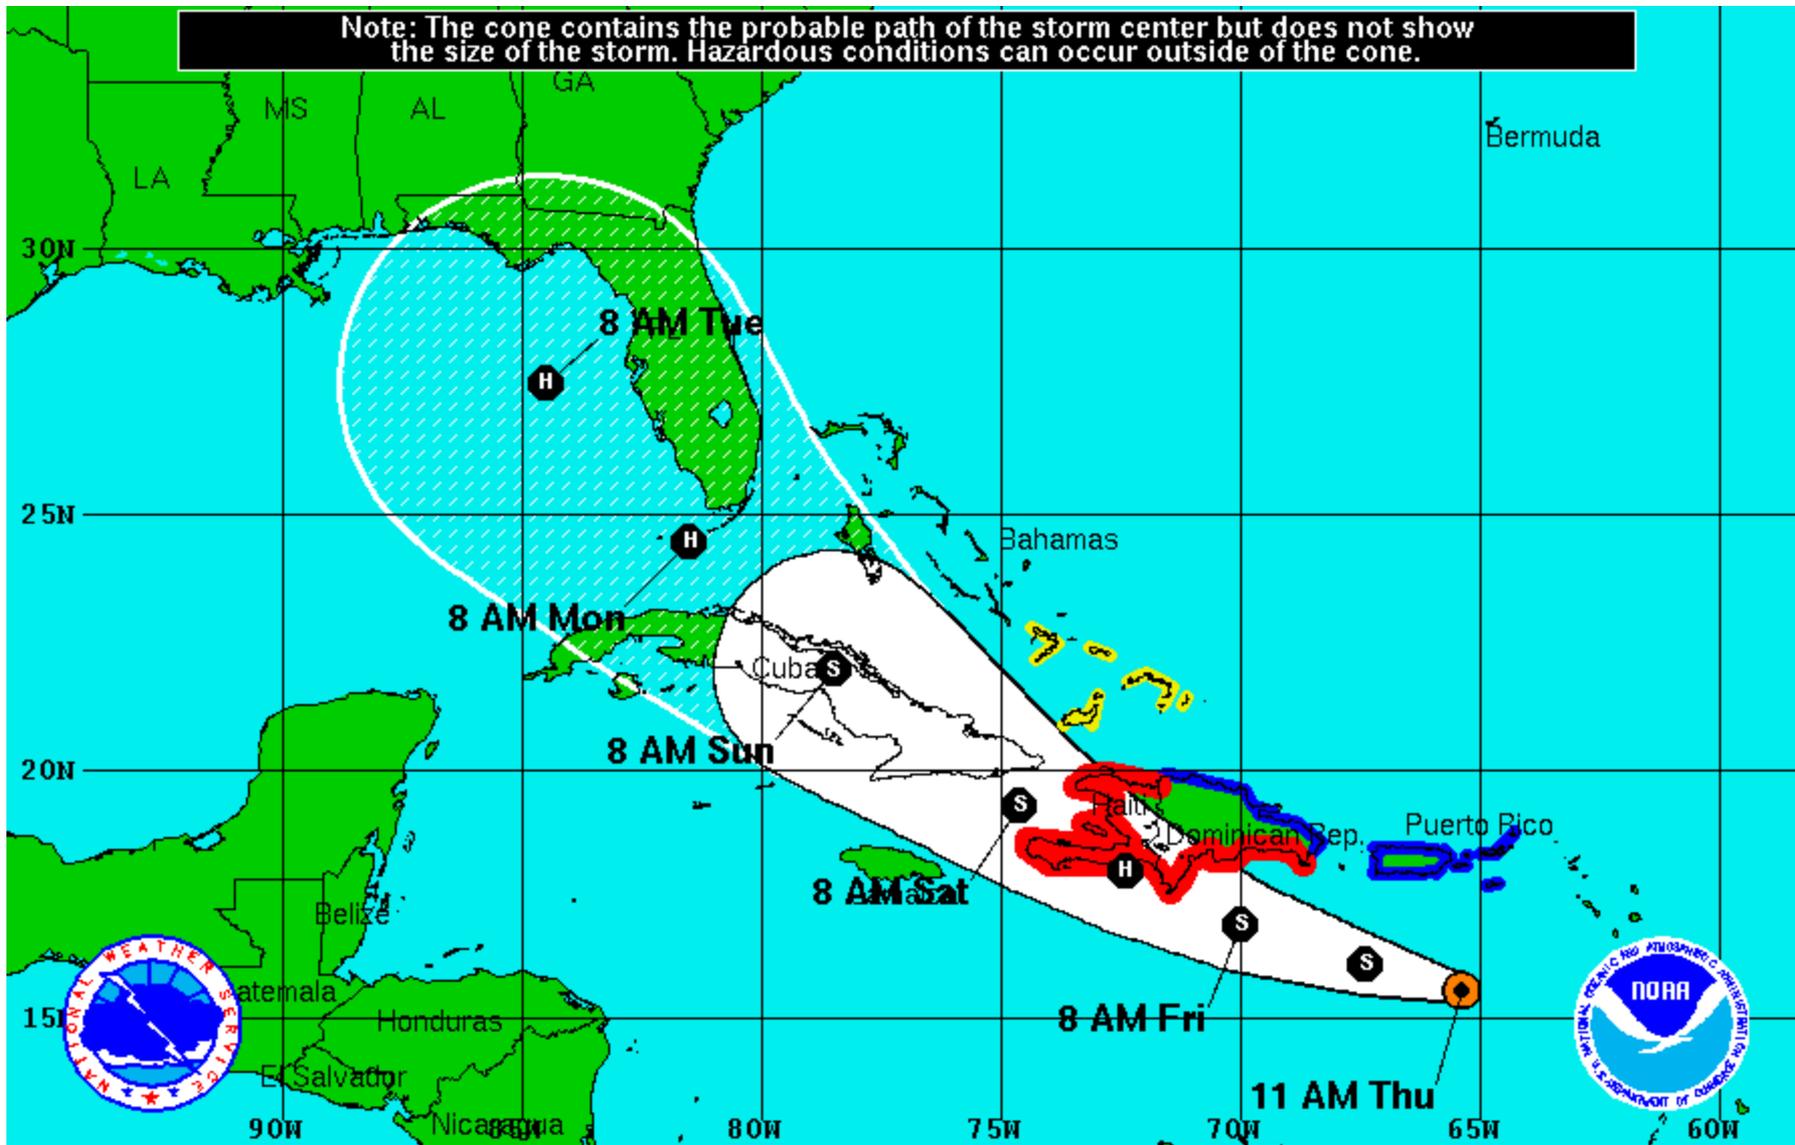

- Guy Aube (CSA)
- Philippe Bally (ESA)
- Emil Cherrington (Cathalac)
- Alessandro Coletta (ASI)
- Lorant Czaran (UN-SPIDER)
- David Farrell (Caribbean Institute for Meteorology and Hydrology)
- Stuart Frye (Chair, NASA/GSFC/SGT) – stuart.frye@nasa.gov
- Francesco Gaetani (GEO Secretariat)
- Bishwa Pandey (World Bank)
- Kenneth Korporal (Environment Canada, GEOSS in the Americas)
- Jennifer Lewis (NOAA)
- Dan Mandl (NASA/SensorWeb)
- Jacob Opadeyi (University of Guyana)
- Bruce Potter (Island Resources)
- Guy Seguin (NASA Consultant/former CSA Engineering Head)

2012 Accomplishments in Caribbean

- MODIS, EO-1, Worldview-2 and Radarsat-2 coverage for hurricanes Ernesto, Isaac, and Sandy for Jamaica, Barbados, St Lucia, British Virgin Islands
- New contacts made in Haiti Risk and Disaster Management for distribution of Hurricane Isaac data products
- Coverage for flooding in Panama, earthquake in Guatemala, algal bloom in El Salvador, wildfires in Belize, landslides in Trinidad
- 34 Radarsat-2, 3 Worldview-2, and 19 EO-1 images targeted and delivered plus daily coverage with MODIS and the Global Flood Monitoring System
- Worked with CSA and MacDonald-Dettwiler to begin development of a REST-ful tasking interface between the Campaign Manager (geobpms.geobliki.com) and the Radarsat-2 image ordering system

NHC's Potential Track Area for TS Isaac

Note: The cone contains the probable path of the storm center but does not show the size of the storm. Hazardous conditions can occur outside of the cone.

Tropical Storm Isaac

Thursday August 23, 2012

11 AM EDT Advisory 10

NWS National Hurricane Center

Current Information:

Center Location 15.6 N 65.4 W

Max Sustained Wind 40 mph

Movement W at 15 mph

Forecast Positions:

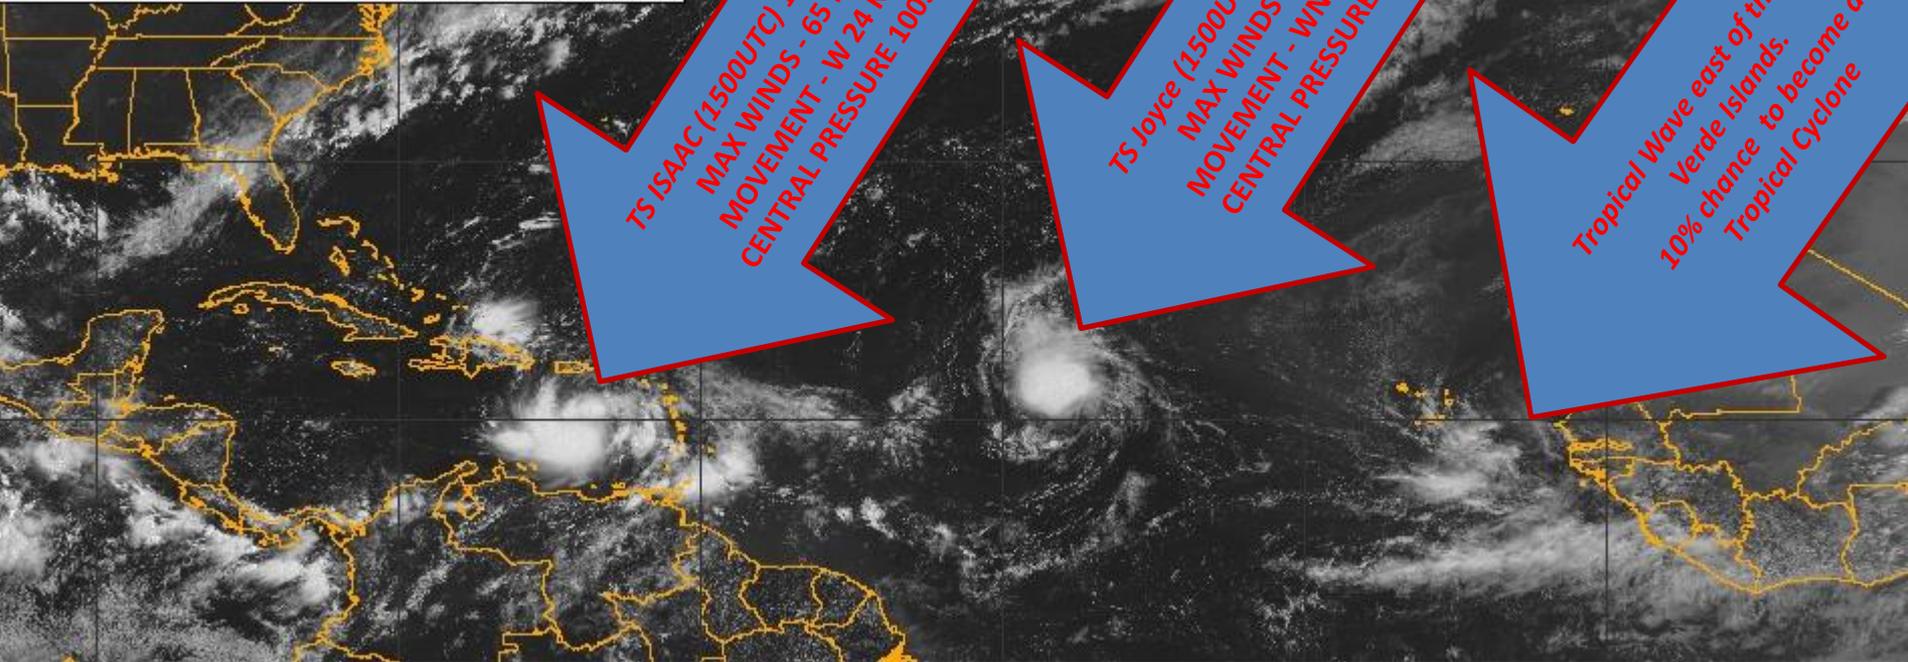

● Tropical Cyclone ○ Post-Tropical

Sustained Winds: D < 39 mph

S 39-73 mph H 74-110 mph M > 110mph

1445 UTC VIS

VIS 23-Aug-2012 1445Z Naval Research Laboratory

TS ISAAC (1500UTC) 15.6N 65.4W
MAX WINDS - 65 KM/H
MOVEMENT - W 24 KM/H
CENTRAL PRESSURE 1003 MB

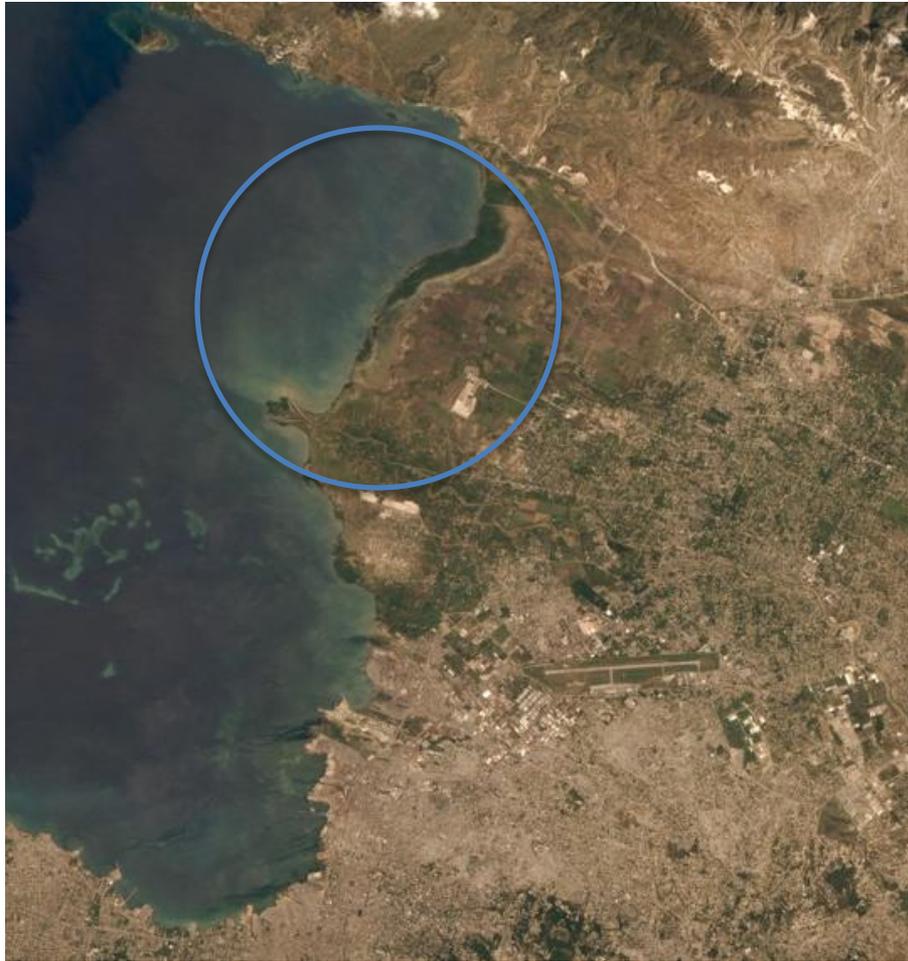

TS Joyce (1500UTC) 15.2N 42.2W
MAX WINDS - 65 KM/H
MOVEMENT - WNW 28 KM/H
CENTRAL PRESSURE 1006 MB

Tropical Wave east of the Cape Verde Islands.
10% chance to become a Tropical Cyclone

MODIS – ISAAC aftermath

EO-1 Port of Prince, Haiti Before and After TS Isaac

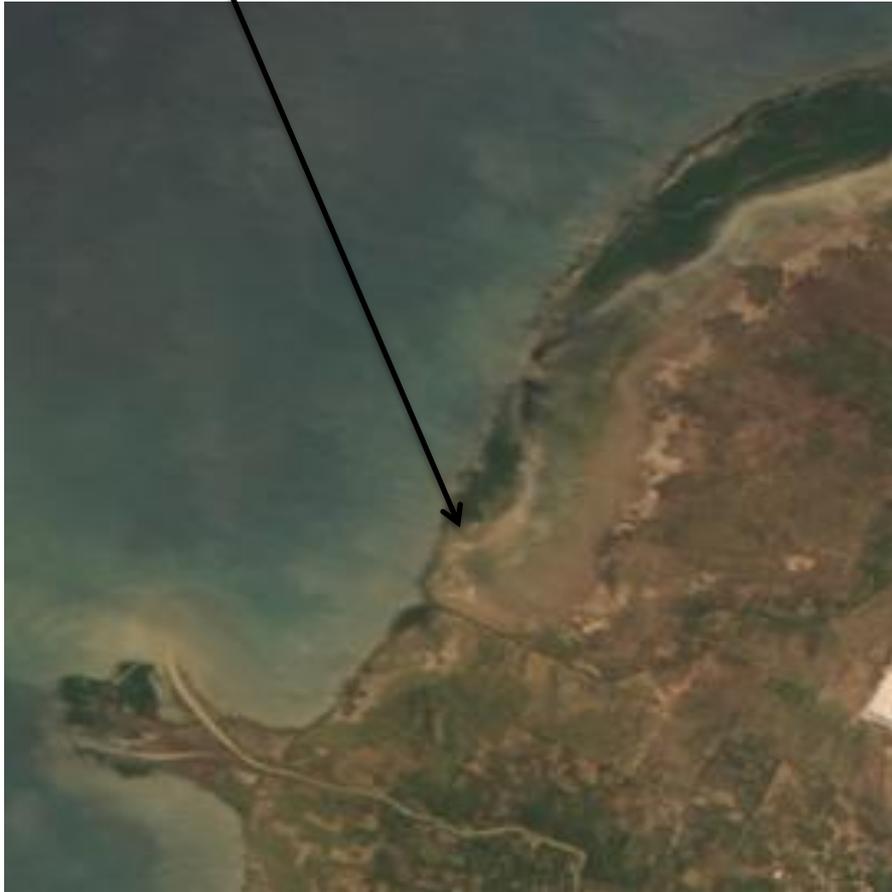

Haiti, Port of Prince area: August 18, 2012
Pre- TS Isaac
EO-1 ALI scene ID: EO1A0090472012231110P0
Pan-sharpened product

Haiti, Port of Prince area: August 31, 2012
Post- TS Isaac
EO-1 ALI scene ID: EO1A0090472012244110KF
Pan-sharpened product

EO-1 North of Port of Prince, Haiti Before and After TS Isaac

Haiti, Port of Prince area: August 18, 2012
Pre- TS Isaac
EO-1 ALI scene ID: EO1A0090472012231110P0
Pan-sharpened product

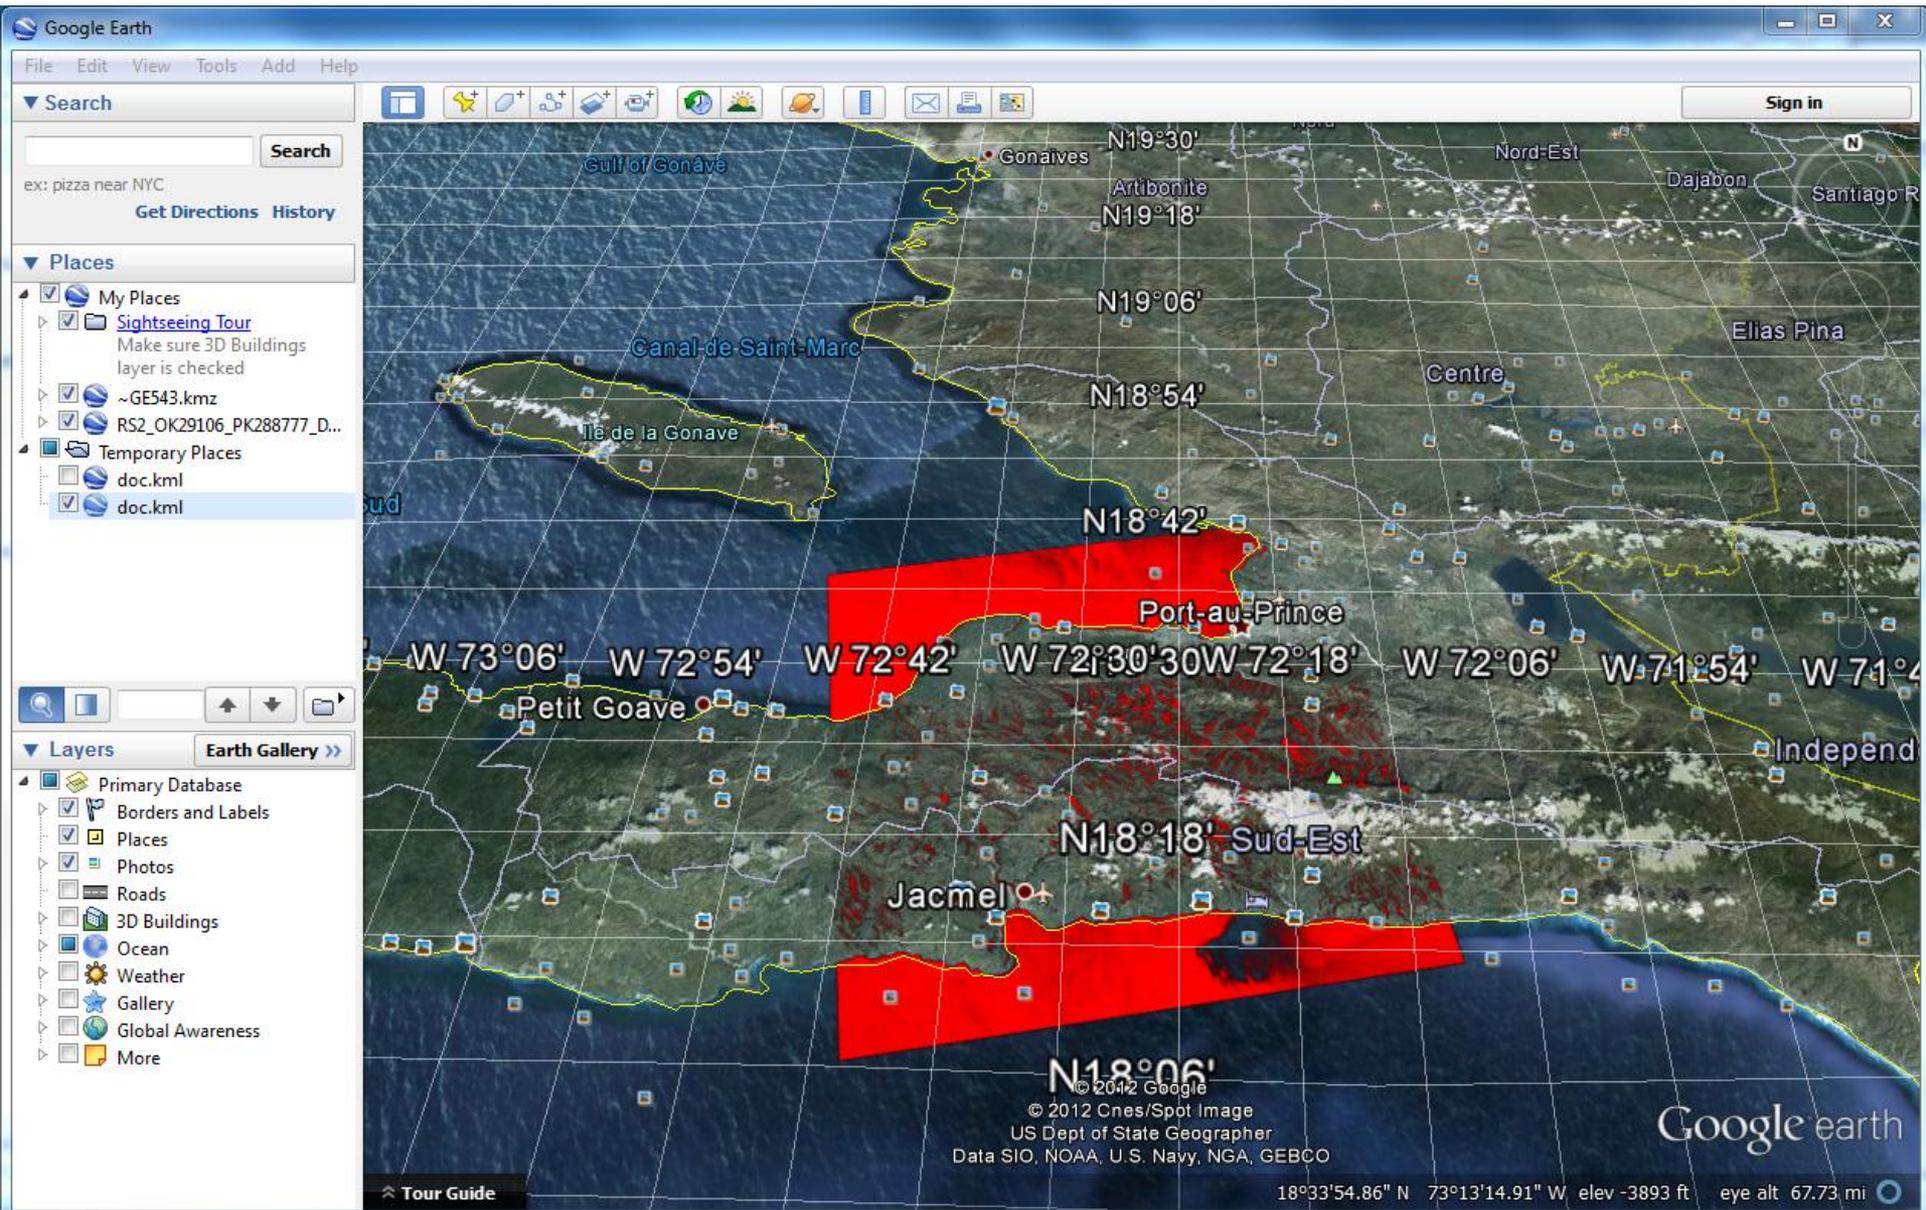

Haiti, Port of Prince area: August 31, 2012
Post- TS Isaac
EO-1 ALI scene ID: EO1A0090472012244110KF
Pan-sharpened product

Radarsat-2 ISAAC aftermath

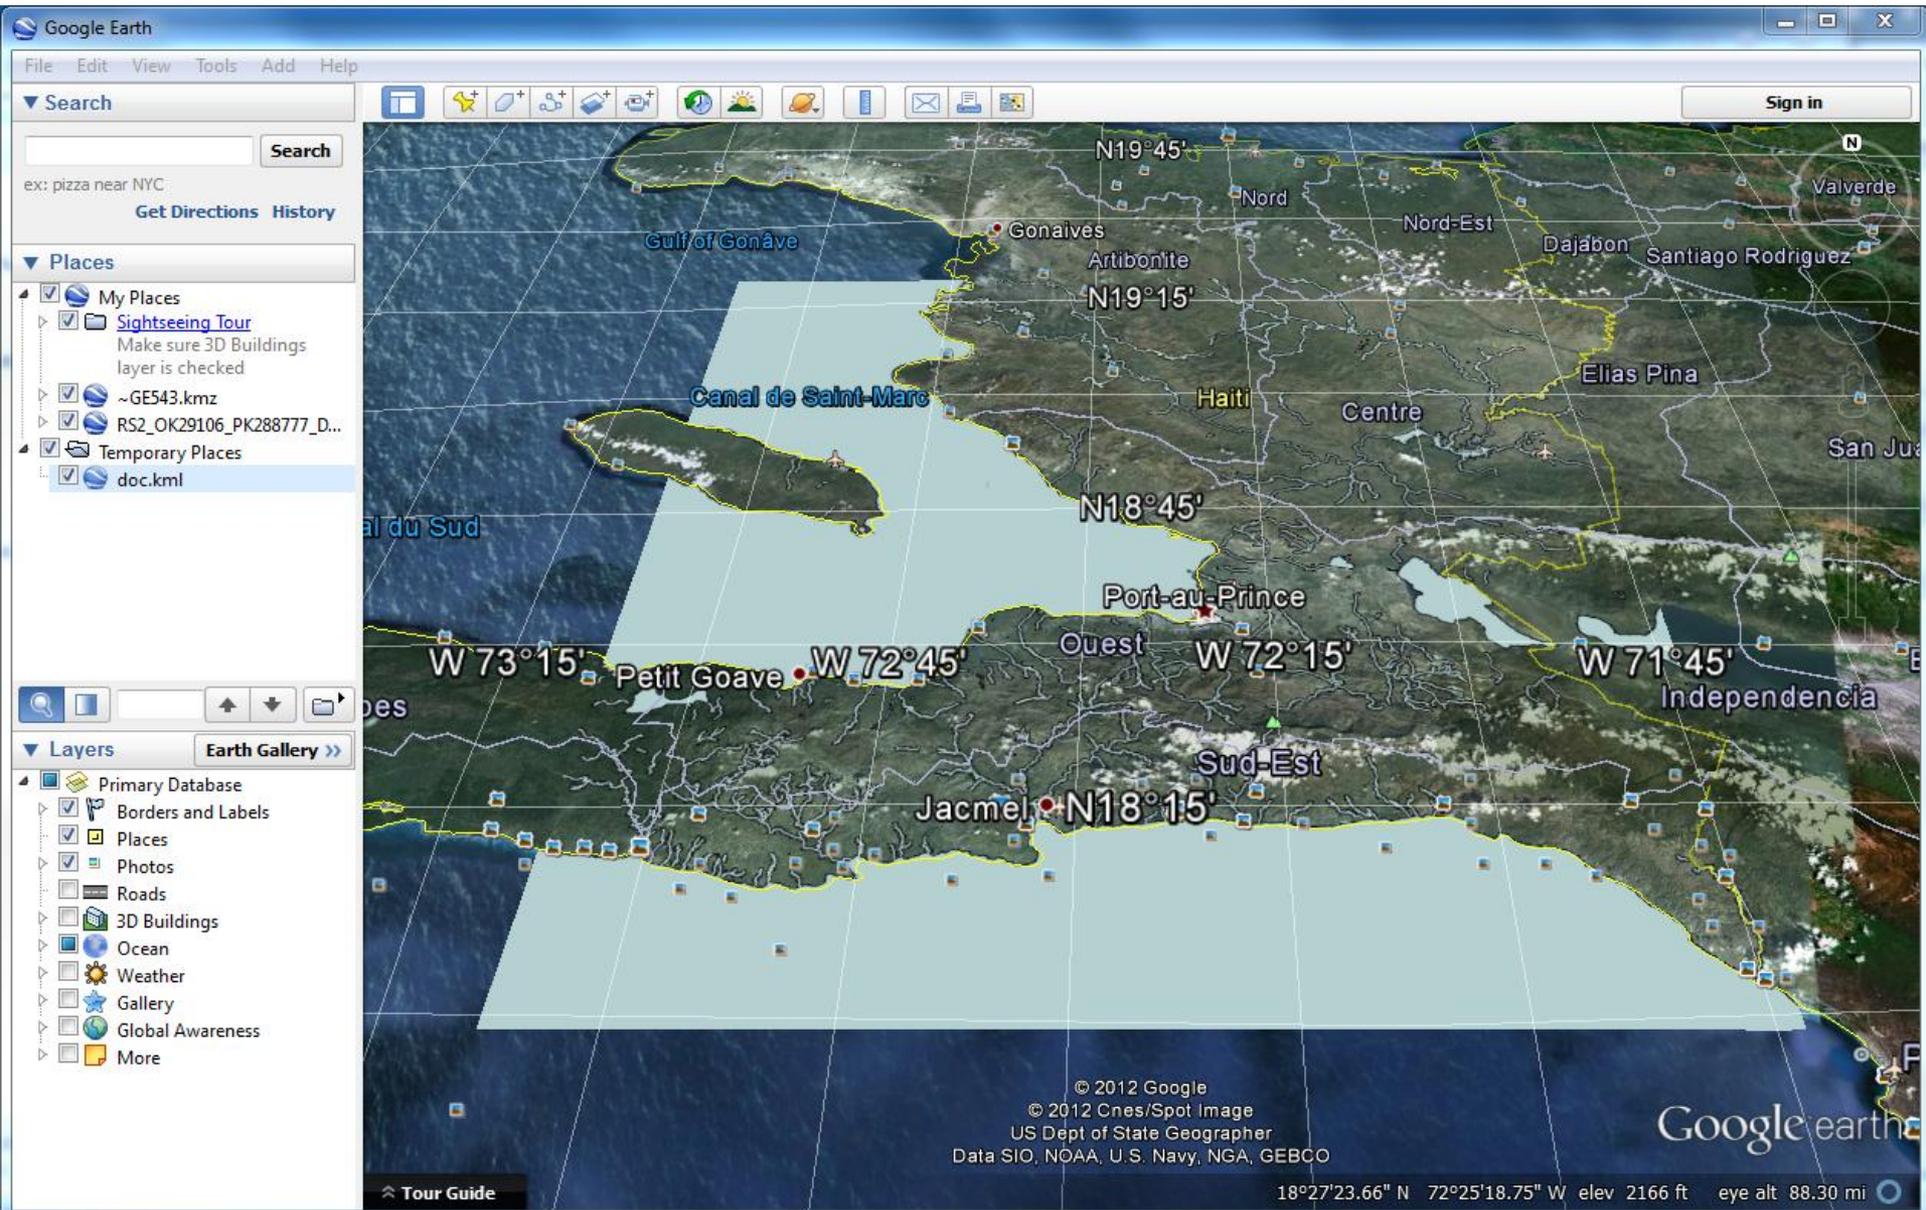

- Developed processing on radarsat.geobliki.com to show water as red layer in Google Earth (next page)
- Extracted Open Street Map baseline water level as light blue layer (second page)
- Served both as tiled doc.kml layers and as Open Street Map polygons (see third page for kml combined overlay)

NASA Web Service URLs and server descriptions available at
<http://eo1.gsfc.nasa.gov/new/sensorWebExp/SensorWebReadMore.html>

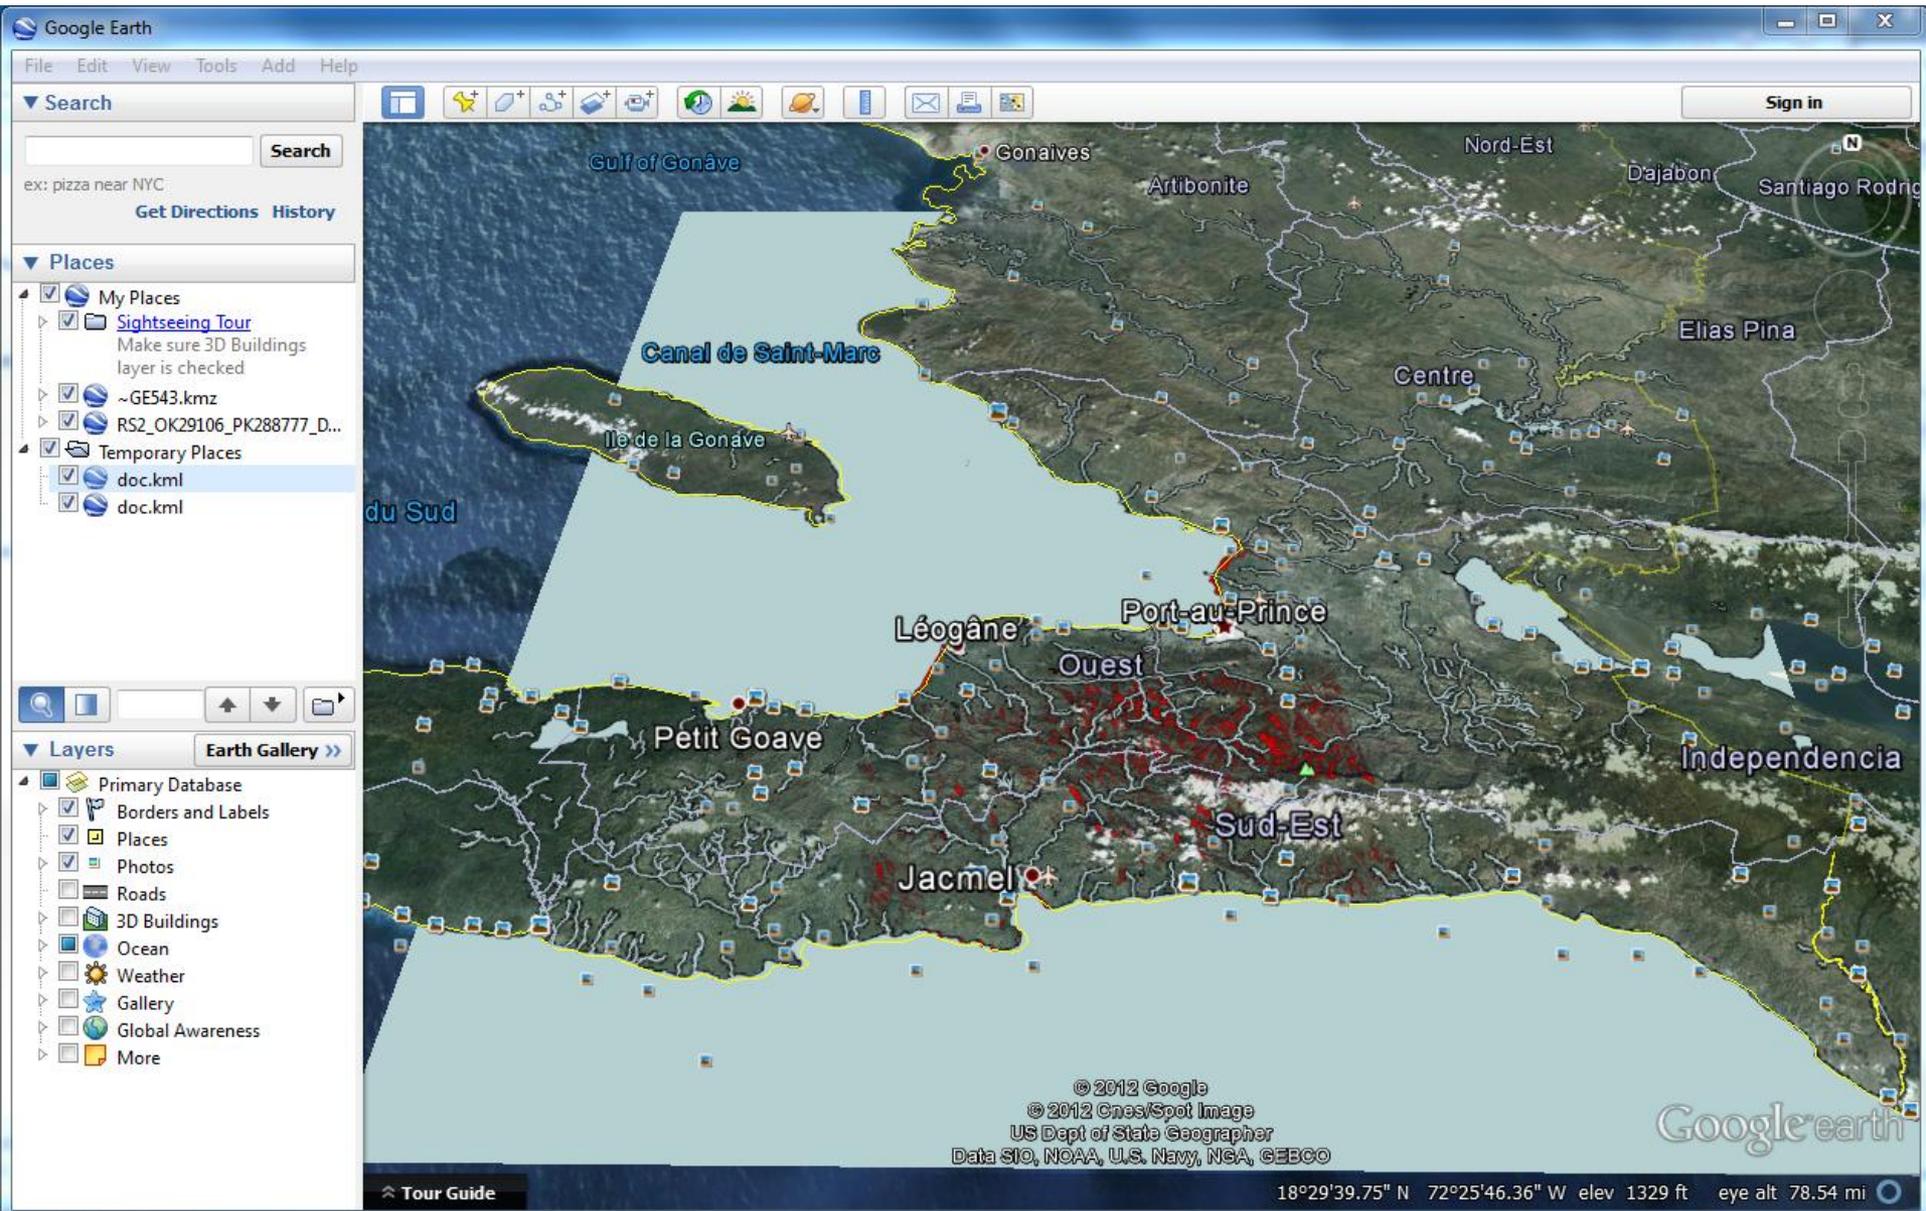

Radarsat-2 flood map (red layer)

OSM Normal Water (blue layer)

Combined Overlays (blue on red)

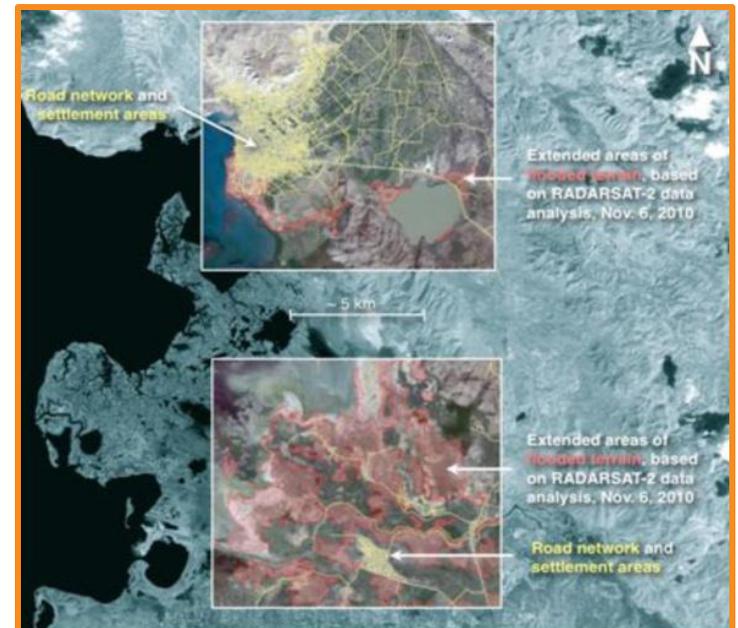

Caribbean Combined EO-1 and Radarsat-2 Example

The 2010 hurricane season in the Caribbean was an active year and had more than 20 named storms. High resolution observations from NASA and CSA satellites were triggered to provide images for near real time assessment to regional centers. This provided national authorities with situational awareness. SensorWeb technology is becoming an integral part of disaster and emergency management and is being evaluated for incorporation into regional protocols for response and recovery.

Detect: Hurricane landfall and precipitation predictions from the Caribbean Institute of Meteorology and Hydrology, Flood model 1 day forecast using TRMM, AMSR-E, and other satellite inputs, daily MODIS flood detection maps, web inputs from national partners
Respond: Trigger EO-1 and Radarsat imagery and generate flood maps for local and regional collaborators
Product Generation: Daily flood extent overlays from MODIS, EO-1, and Radarsat that cover 3 hurricanes (Earl, Nicole, Tomas) for Haiti, Jamaica, St Lucia, and Virgin Islands
Delivery: Aggregated and custom processed data layers on open cloud platform accessible on the internet

“I applaud the SensorWeb Toolbox development team because they have created a real-world capability that has connected satellite earth observation data to the local users ...which leads to saving lives and property in the developing world.”

— Daniel E. Irwin, Director of NASA’s SERVIR Program

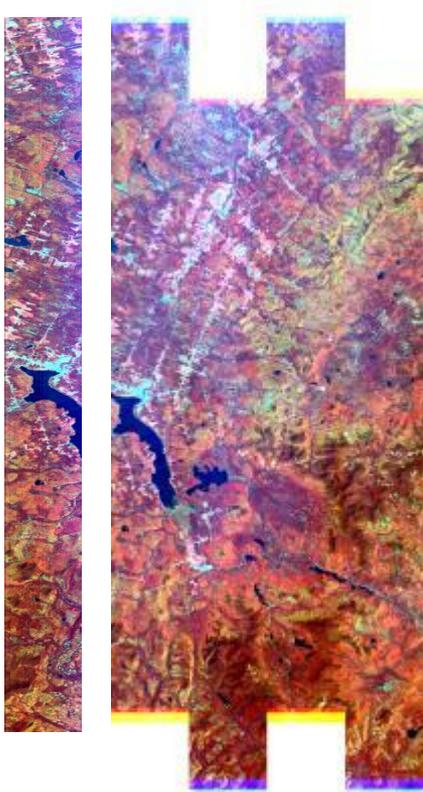

EO-1 Observations of Lac Megantic Train Wreck and Oil Spill

- Images acquired on July 10, 21, 31, August 6, 24, and September 1, 17
 - UTC days 191, 202, 212, 218, 236,249, and 260
- Both ALI (9-30m spectral bands and a 10m panchromatic band) and Hyperion (190-30m spectral bands in 400-2400 nm range)
- Level 1R (radiometrically corrected) and Level 1G (terrain corrected) delivered plus pan-sharpened products for all ALI scenes

LC80090472013117LGN01 vis_composite (5-4-3) (EPSG 4326) TIF Compressed 76.4MB

Using WCPS

Original Data Set 8 OLI Bands TIF 108.7MB each (7461x7281 pixels 30m resolution)

Surface Water Detection Product

Using WCPS

5.9MB TIF LZW Compressed

**Note: Particular
Algorithm is Not
Relevant In this
Example**

Analysis

- **TIF Surface Water Product (5.9MB)**
 - Preserves coordinates/projection
 - RGBA (4 bands for a bit mask water/no-water) for visualization
- **PNG Product (753KB)**
 - But no coordinates/projection information
- **After ZIP Compression**
 - TIF: 2.2 MB
 - PNG: 638KB (but not useable for cartography)

Vectorization

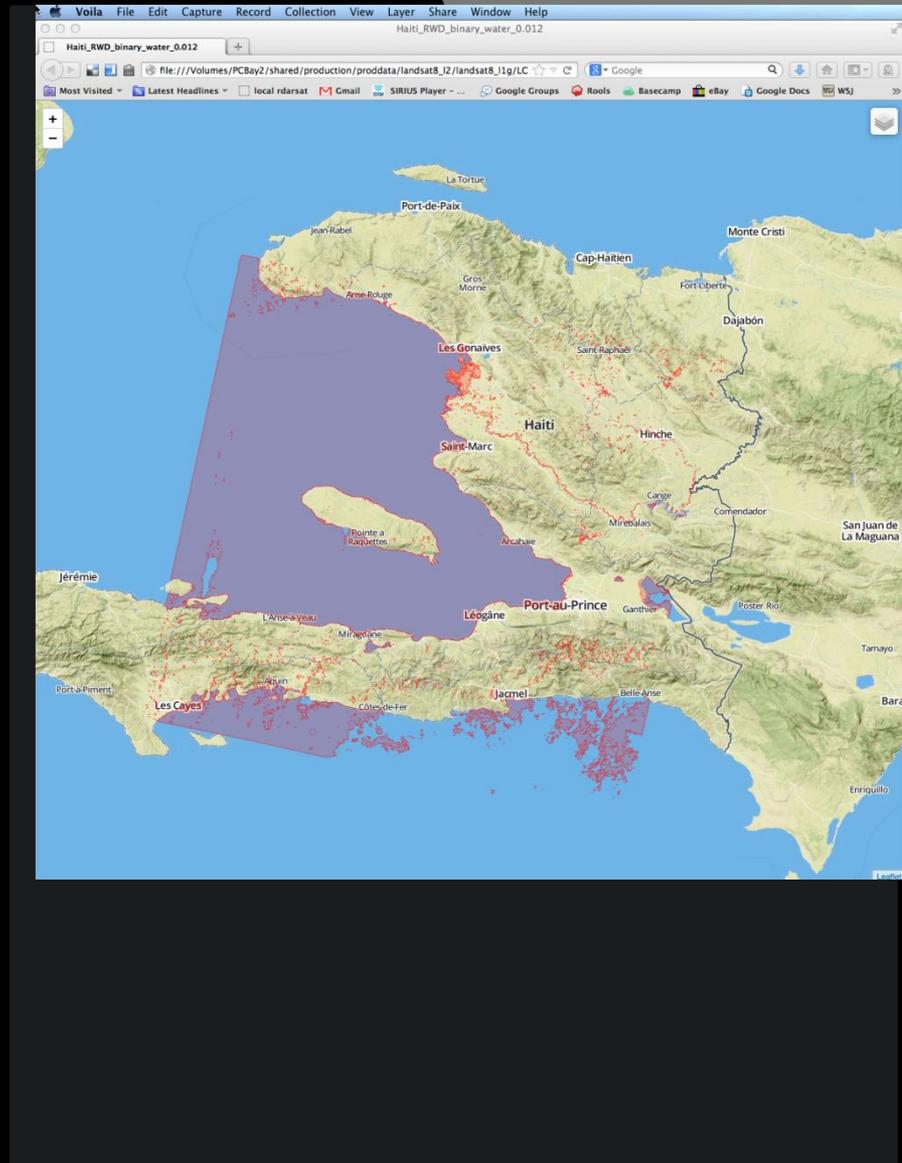

- **Autotrace (potrace) and Convert to geojson**
 - >10.6MB
- **Convert to topojson**
 - >3.5MB
- **Simplify Lines 0.50 (Visvalingam Algorithm)**
 - >2MB
- **Compress**
 - >350KB

Blue: OSM Reference Water

Background: Terrain Map From Mapbox

OSM Marshes / Swamp / Watersheds

OSM Marshes/Watershed Tags Are Important

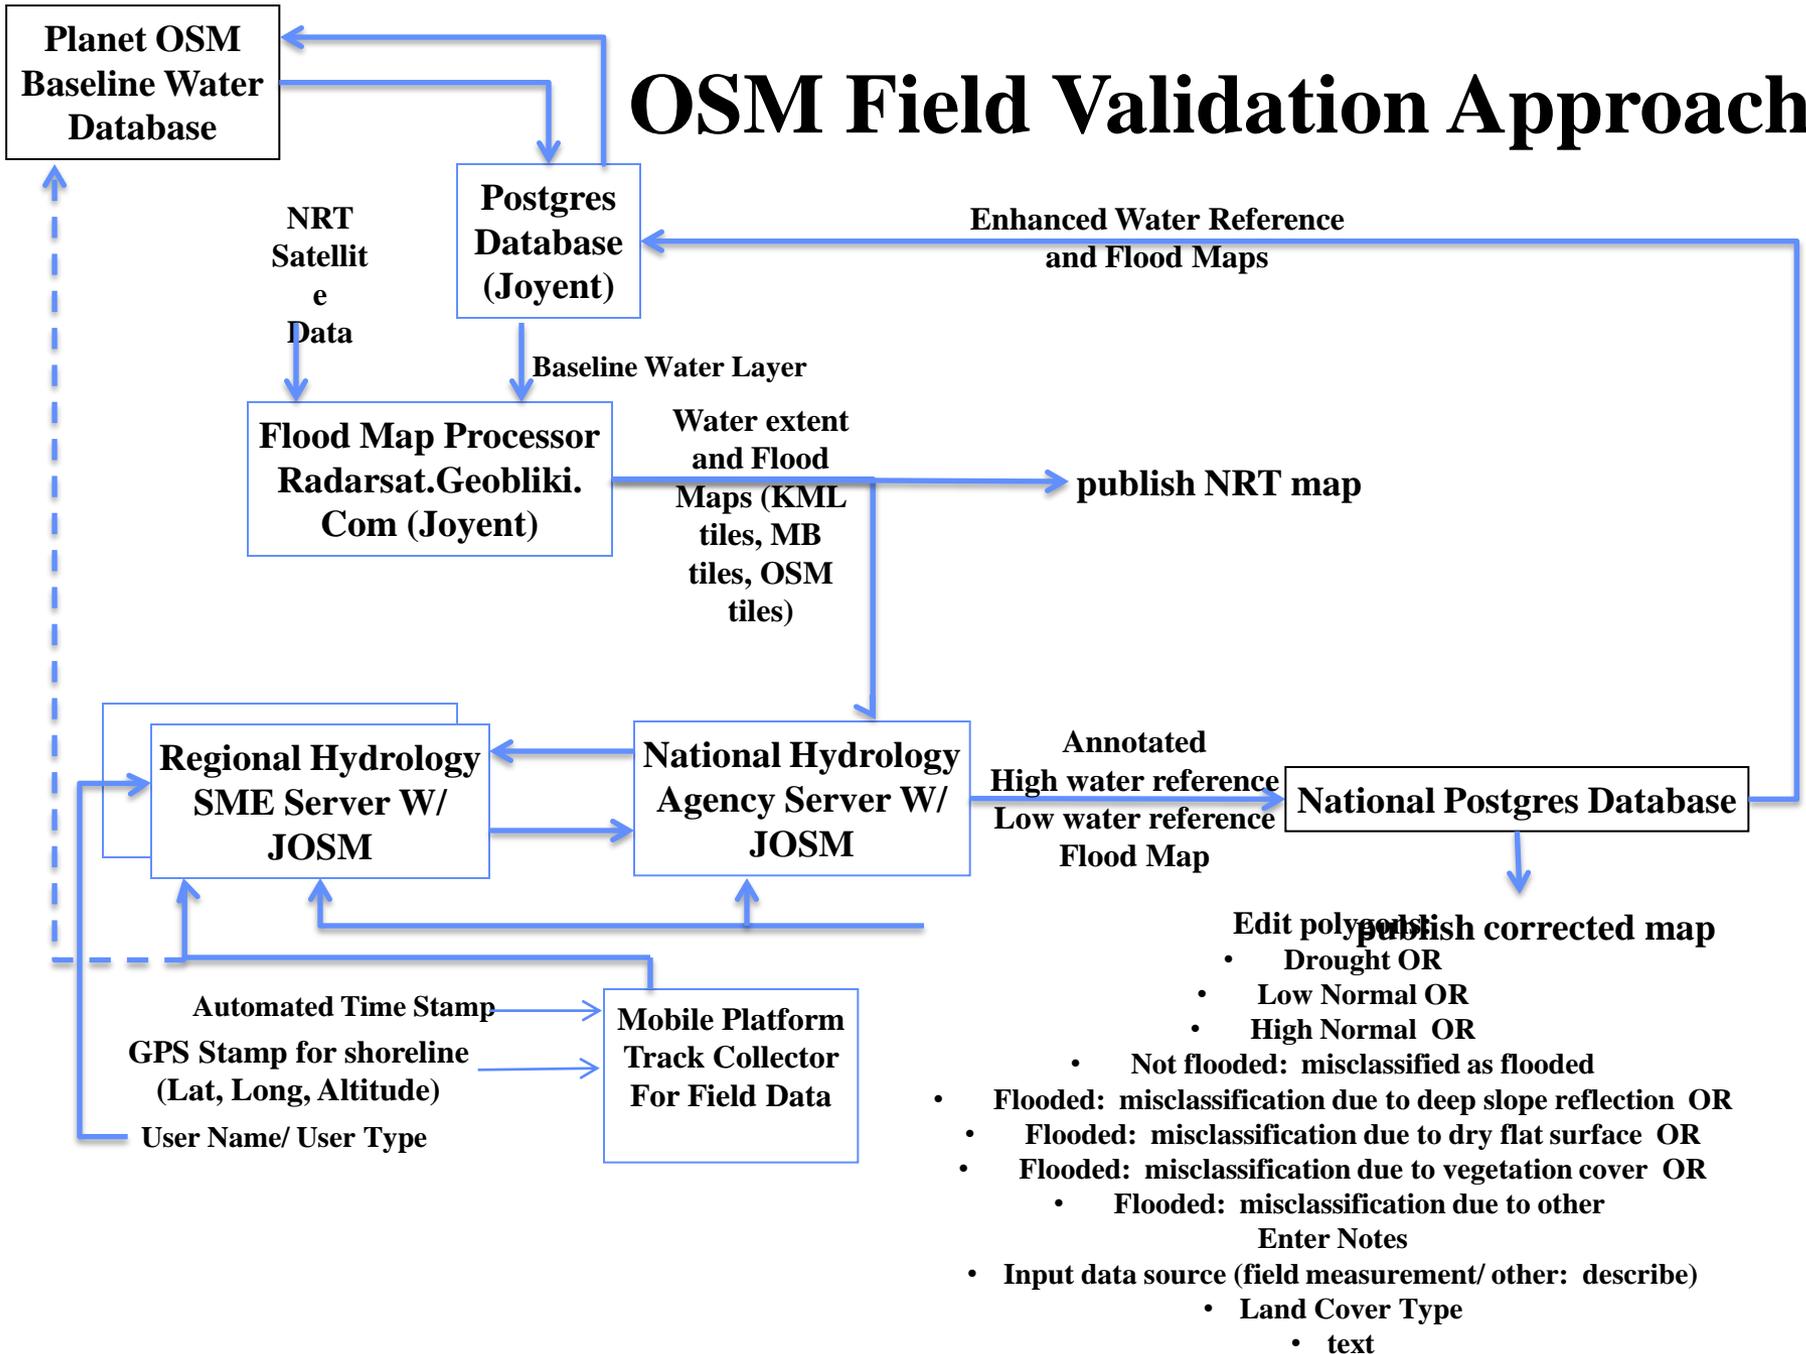

File Statistics

- **Processed Binary File (tif) 163.1MB**
- **GeoJSON 40MB**
- **GeoJSON.zip 7.2MB**
- **TopoJSON 6.4MB**
- **TopoJSON.zip 689KB**
- **Simplified TopoJSON < 1MB**
- **Simplified Compressed 210KB**

Issues

- **HAND processing needs validation**
- **Map Rendering (Browser)**
 - **A little slow to manage all the vectors (but does work)**
- **Next steps: Vector Tiling (Vector rendering at multiple scales) to speed map rendering for high res imagery [Already implemented in OSM]**

OSM Field Validation Approach

Ground Cal/Val Exercise with Radarsat, EO-1, Ground Team, Helicopter team, OpenStreetMap, Crowd Sourcing on Kavango river in Namibia 1-30-13

The screenshot displays the Java OpenStreetMap Editor interface. The main map area shows satellite imagery of the Kavango river in Namibia. Several data layers are overlaid on the map:

- Radarsat Water Edge Detection (yellow polygon):** A yellow polygon outlines the water body.
- EO-1 Water Edge Detection (red):** Red lines and markers indicate the water edge from EO-1 data.
- Team 1 walking bank to collect GPS points (red X's):** Red 'X' markers along the riverbank represent GPS points collected by Team 1.
- Team 2 walking bank to collect GPS points (green X's):** Green 'X' markers along the riverbank represent GPS points collected by Team 2.
- One of 500 GPS photos from helicopter:** A specific GPS point is highlighted with a red 'X', and a yellow arrow points to a photo window.

The interface includes a menu bar (File, Edit, View, Tools, Presets, Imagery, Windows, Audio, Help), a toolbar with various editing tools, and a Layers panel on the right. The Layers panel shows the following layers:

- Geotagged Images
- Geotagged Images
- Markers from Divundu Team 2.gpx
- Markers from Divundu Team 1.gpx
- Merged Radarat Kavango 1-14-13.osm
- Bing Sat

The Properties panel on the right shows the following information:

| Key | Value |
|------|-------|
| name | water |

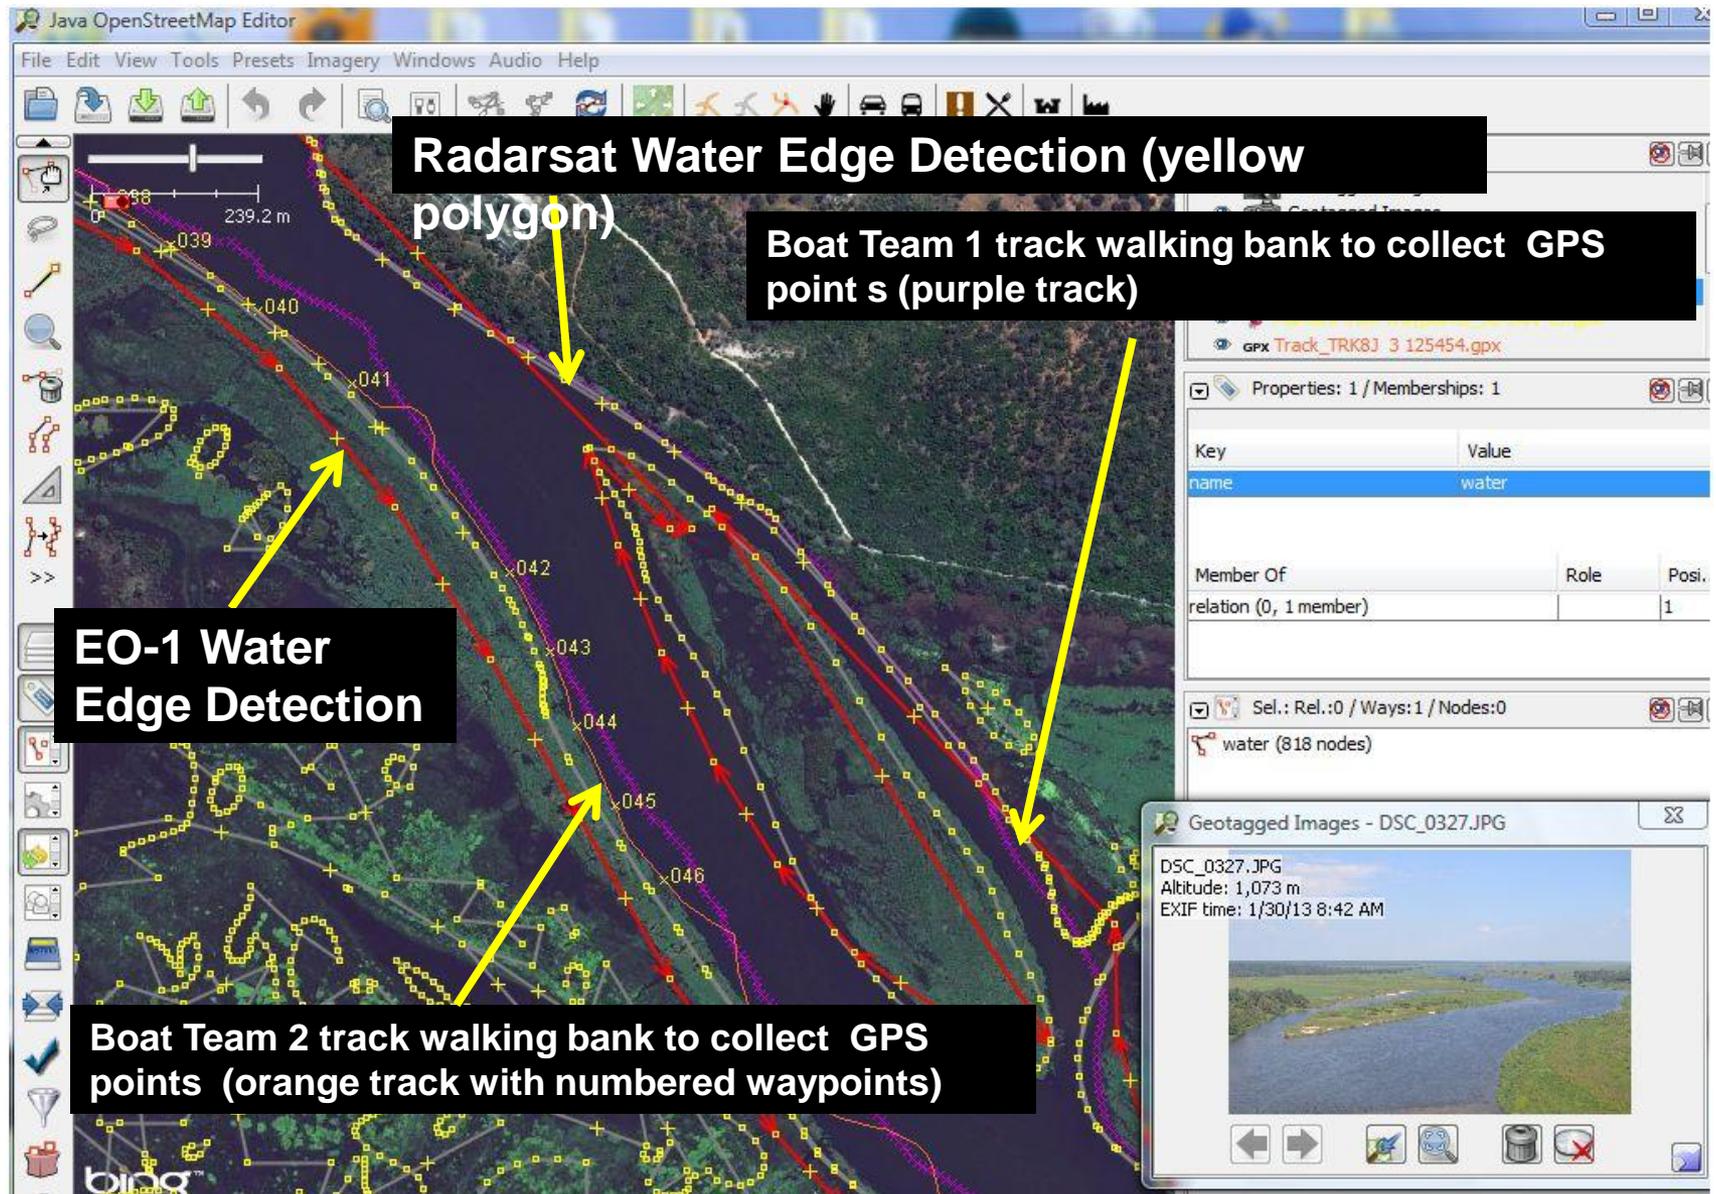

| Member Of | Role | Posi... |
|------------------------|------|---------|
| relation (0, 1 member) | | 1 |

The photo window titled "Geotagged Images - DSC_0316.JPG" displays the following metadata:

- DSC_0316.JPG
- Altitude: 1,084 m
- EXIF time: 1/30/13 8:37 AM

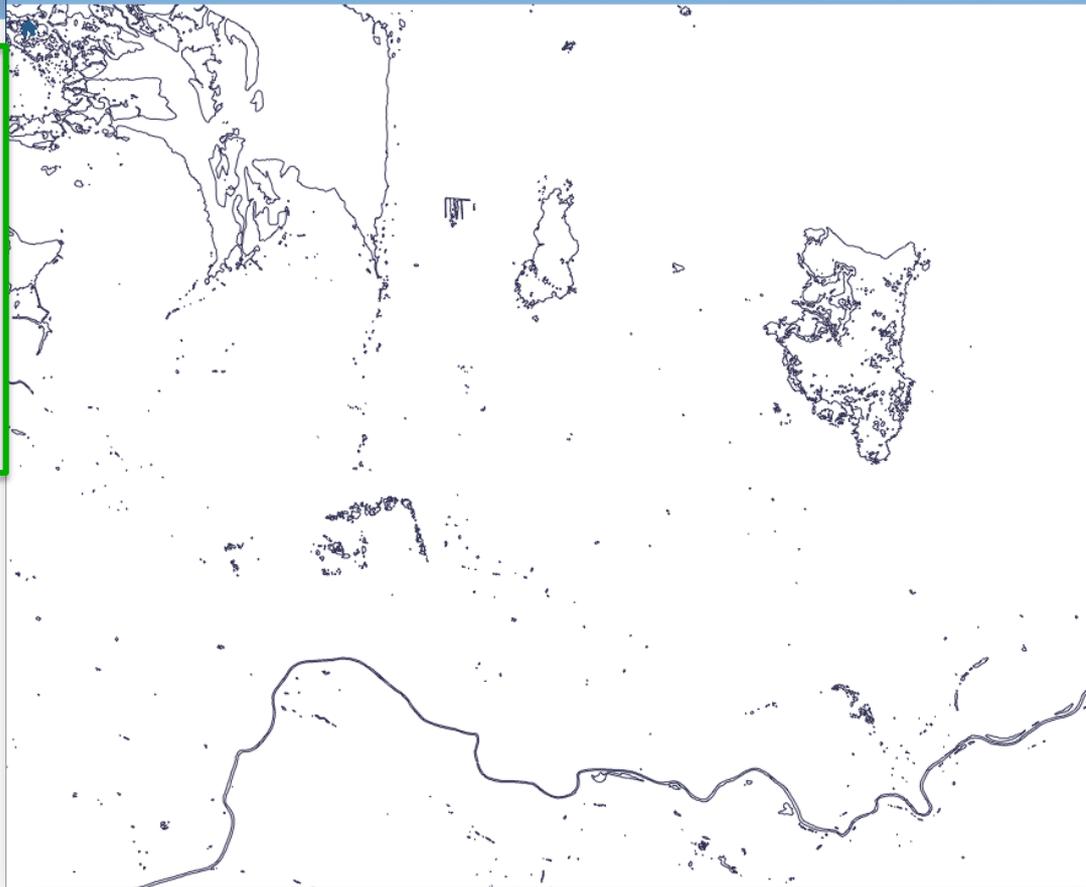

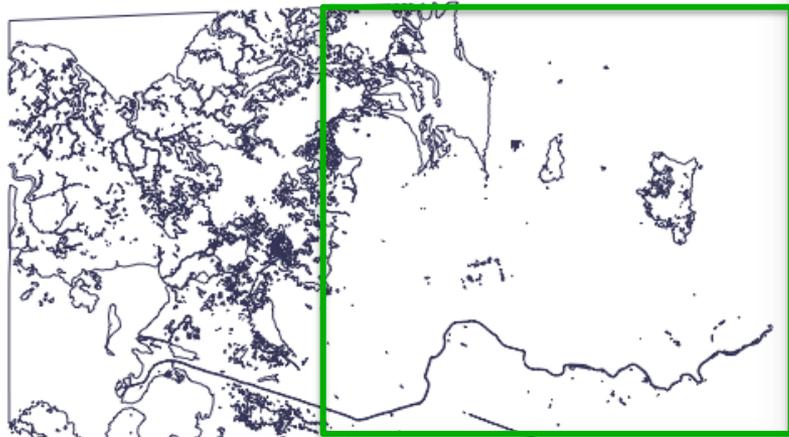

The status bar at the bottom shows coordinates (-18.107481, 21.6210009), a scale of 115.7 km, and a note "(no object)".

Integrated Water Edge Detection Display with Boat GPS Measurements, GPS located photos, Radarsat/EO-1 water edge detections
